

WE CAN HAVE FROGS AND CATCH FISH TOO

Reversing widespread legacy impacts of introduced sportfish on declining amphibians in glacial lake basins of the Klamath Mountains

Justin Garwood

+ over 40 seasonal staff from 2021-2024

Outline

- Klamath High Mountain Wetland Habitats
- Unique Communities and Biodiversity
- A New Fishery is Born
- What Could Go Wrong?
- Measuring Ecological Change After Policy Shifts
- Prioritizing Fishery Lakes and Conservation Lakes
- Targeted Restoration
- Promoting Responsible Fisheries

Pleistocene Glaciers Left Hundreds of Lake Basins Behind

Klamath Mountain Lake Ecosystems

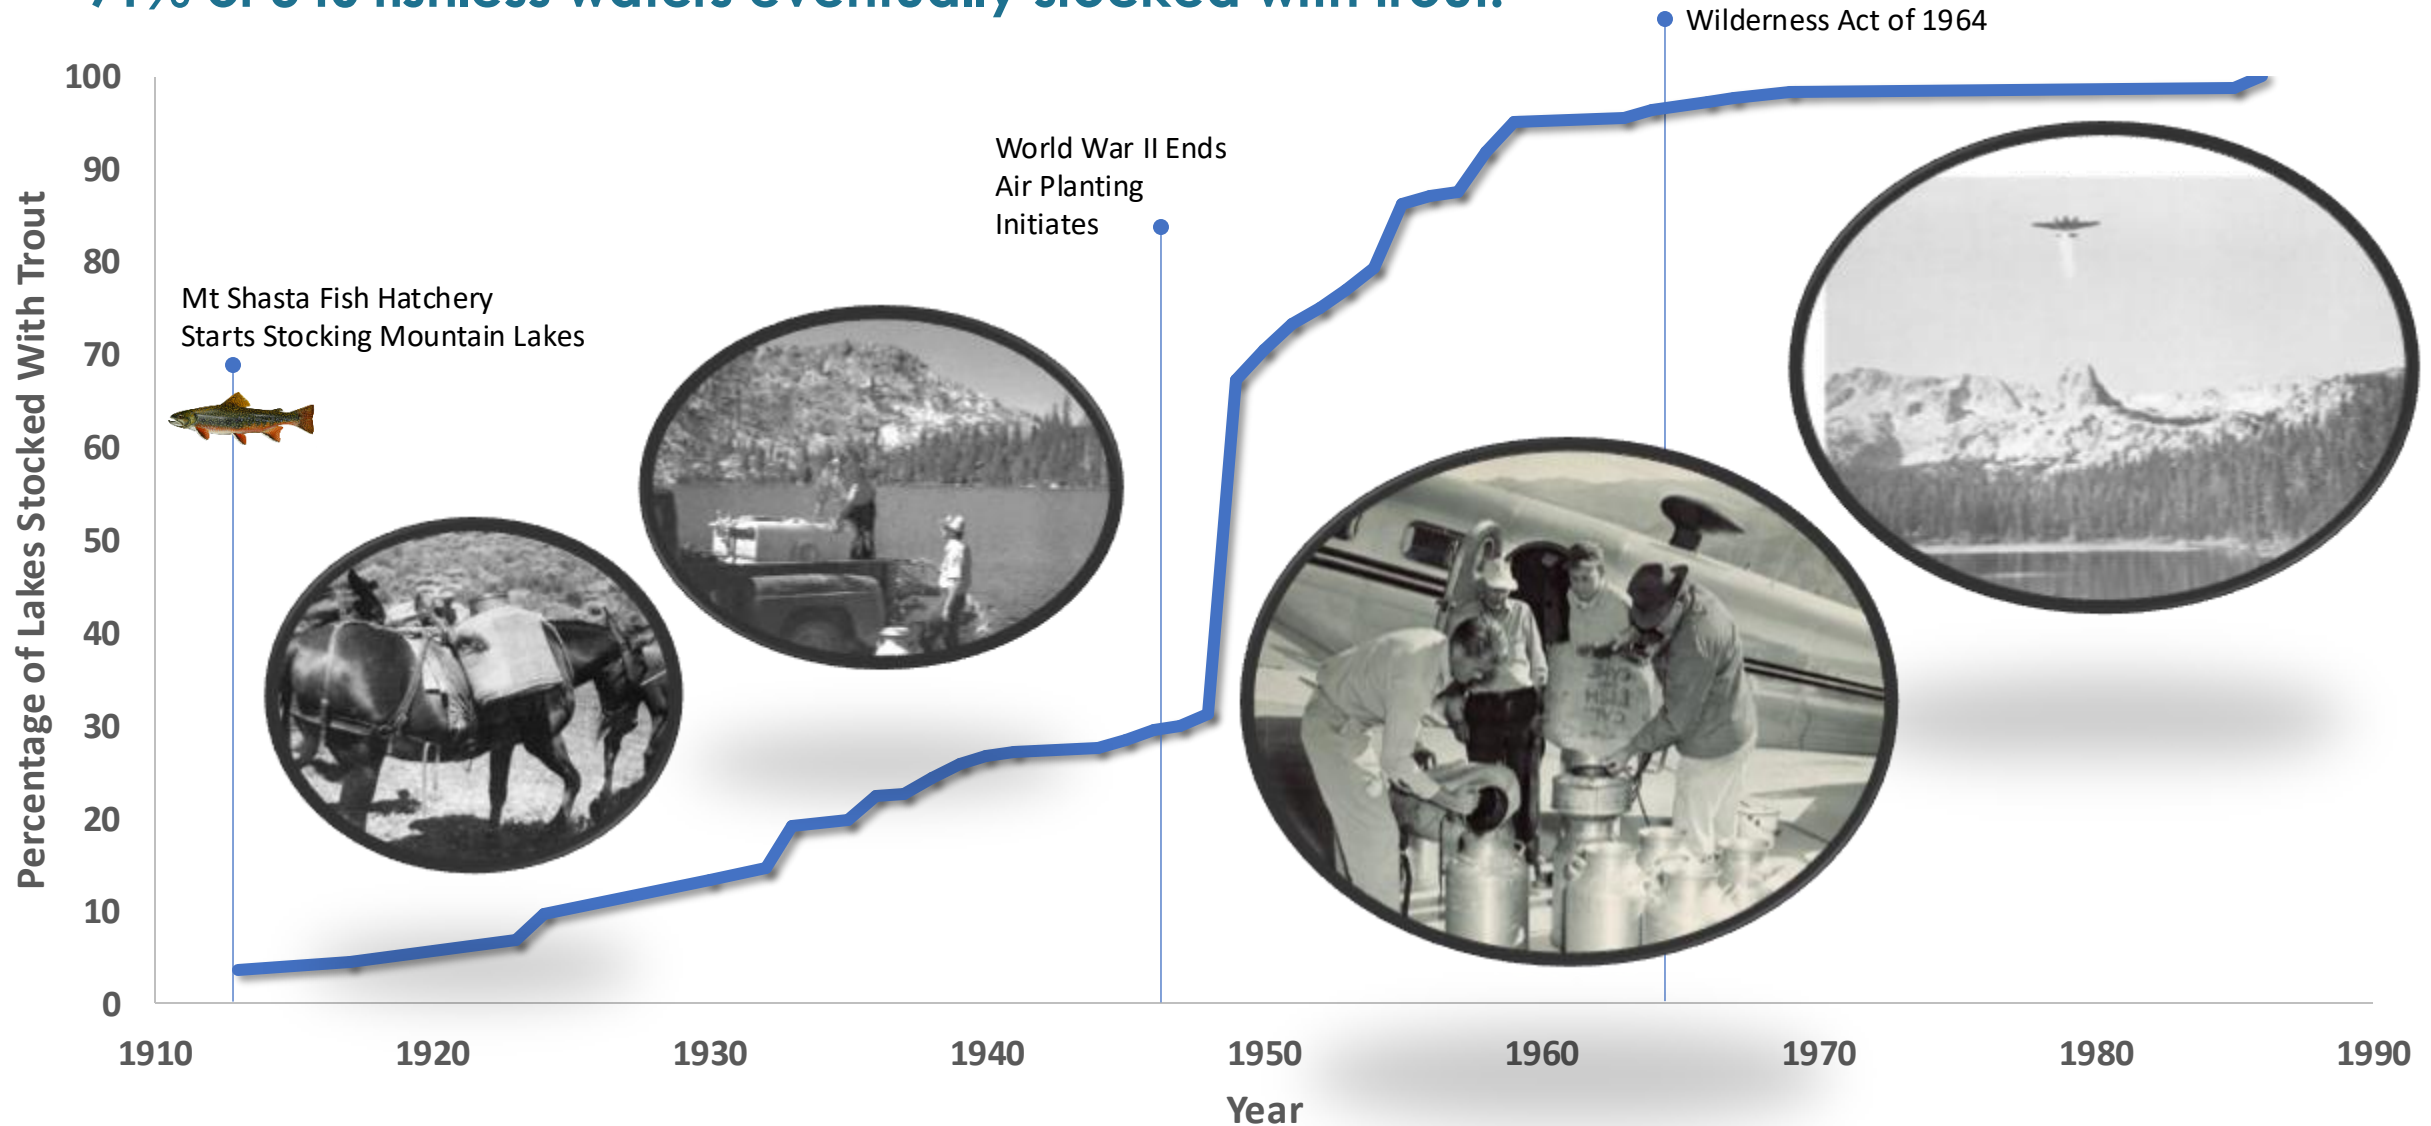

Amphibians can represent substantial biomass in mountain lakes

Stocking Chronology Across Lakes of the Klamath Mountains

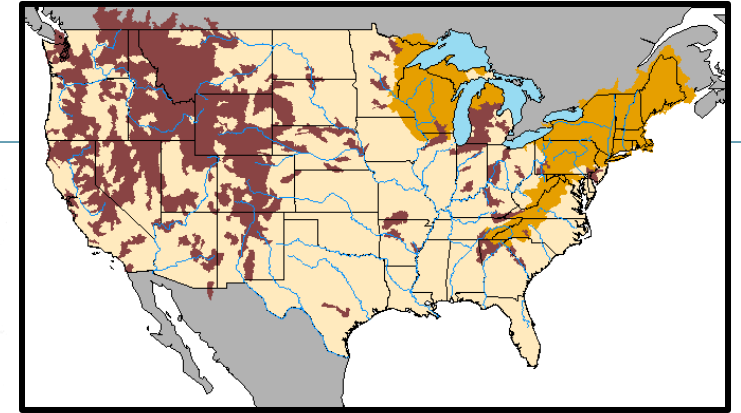

91% of 340 fishless waters eventually stocked with trout!

Trout Species in the Klamath Mountains

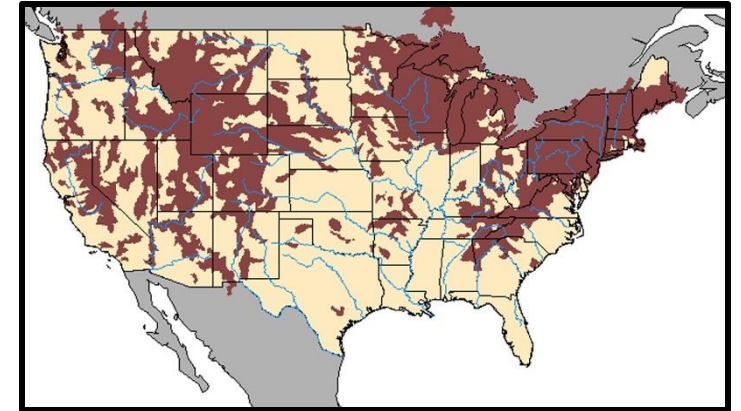

- Brook Trout
(*Salvelinus fontinalis*)

- Native to the East Coast
- Can spawn in lakes
- Stocking period: 1912-2016 (at least 286 lakes)

- Brown Trout
(*Salmo trutta*)

- Native to Europe
- Requires streams to spawn
- Stocking period: 1917-2007 (at least 44 lakes)

- Rainbow Trout
(*Oncorhynchus mykiss*)

- Regionally native
- Requires streams to spawn
- Stocking period: 1930-Present (at least 241 lakes)

Aquatic Invertebrates

Zooplankton

Piscivorous

Birds

Klamath Mountain Lake Ecosystems

Insectivorous

Amphibians in the climate vice: loss and restoration of resilience of montane wetland ecosystems in the western US

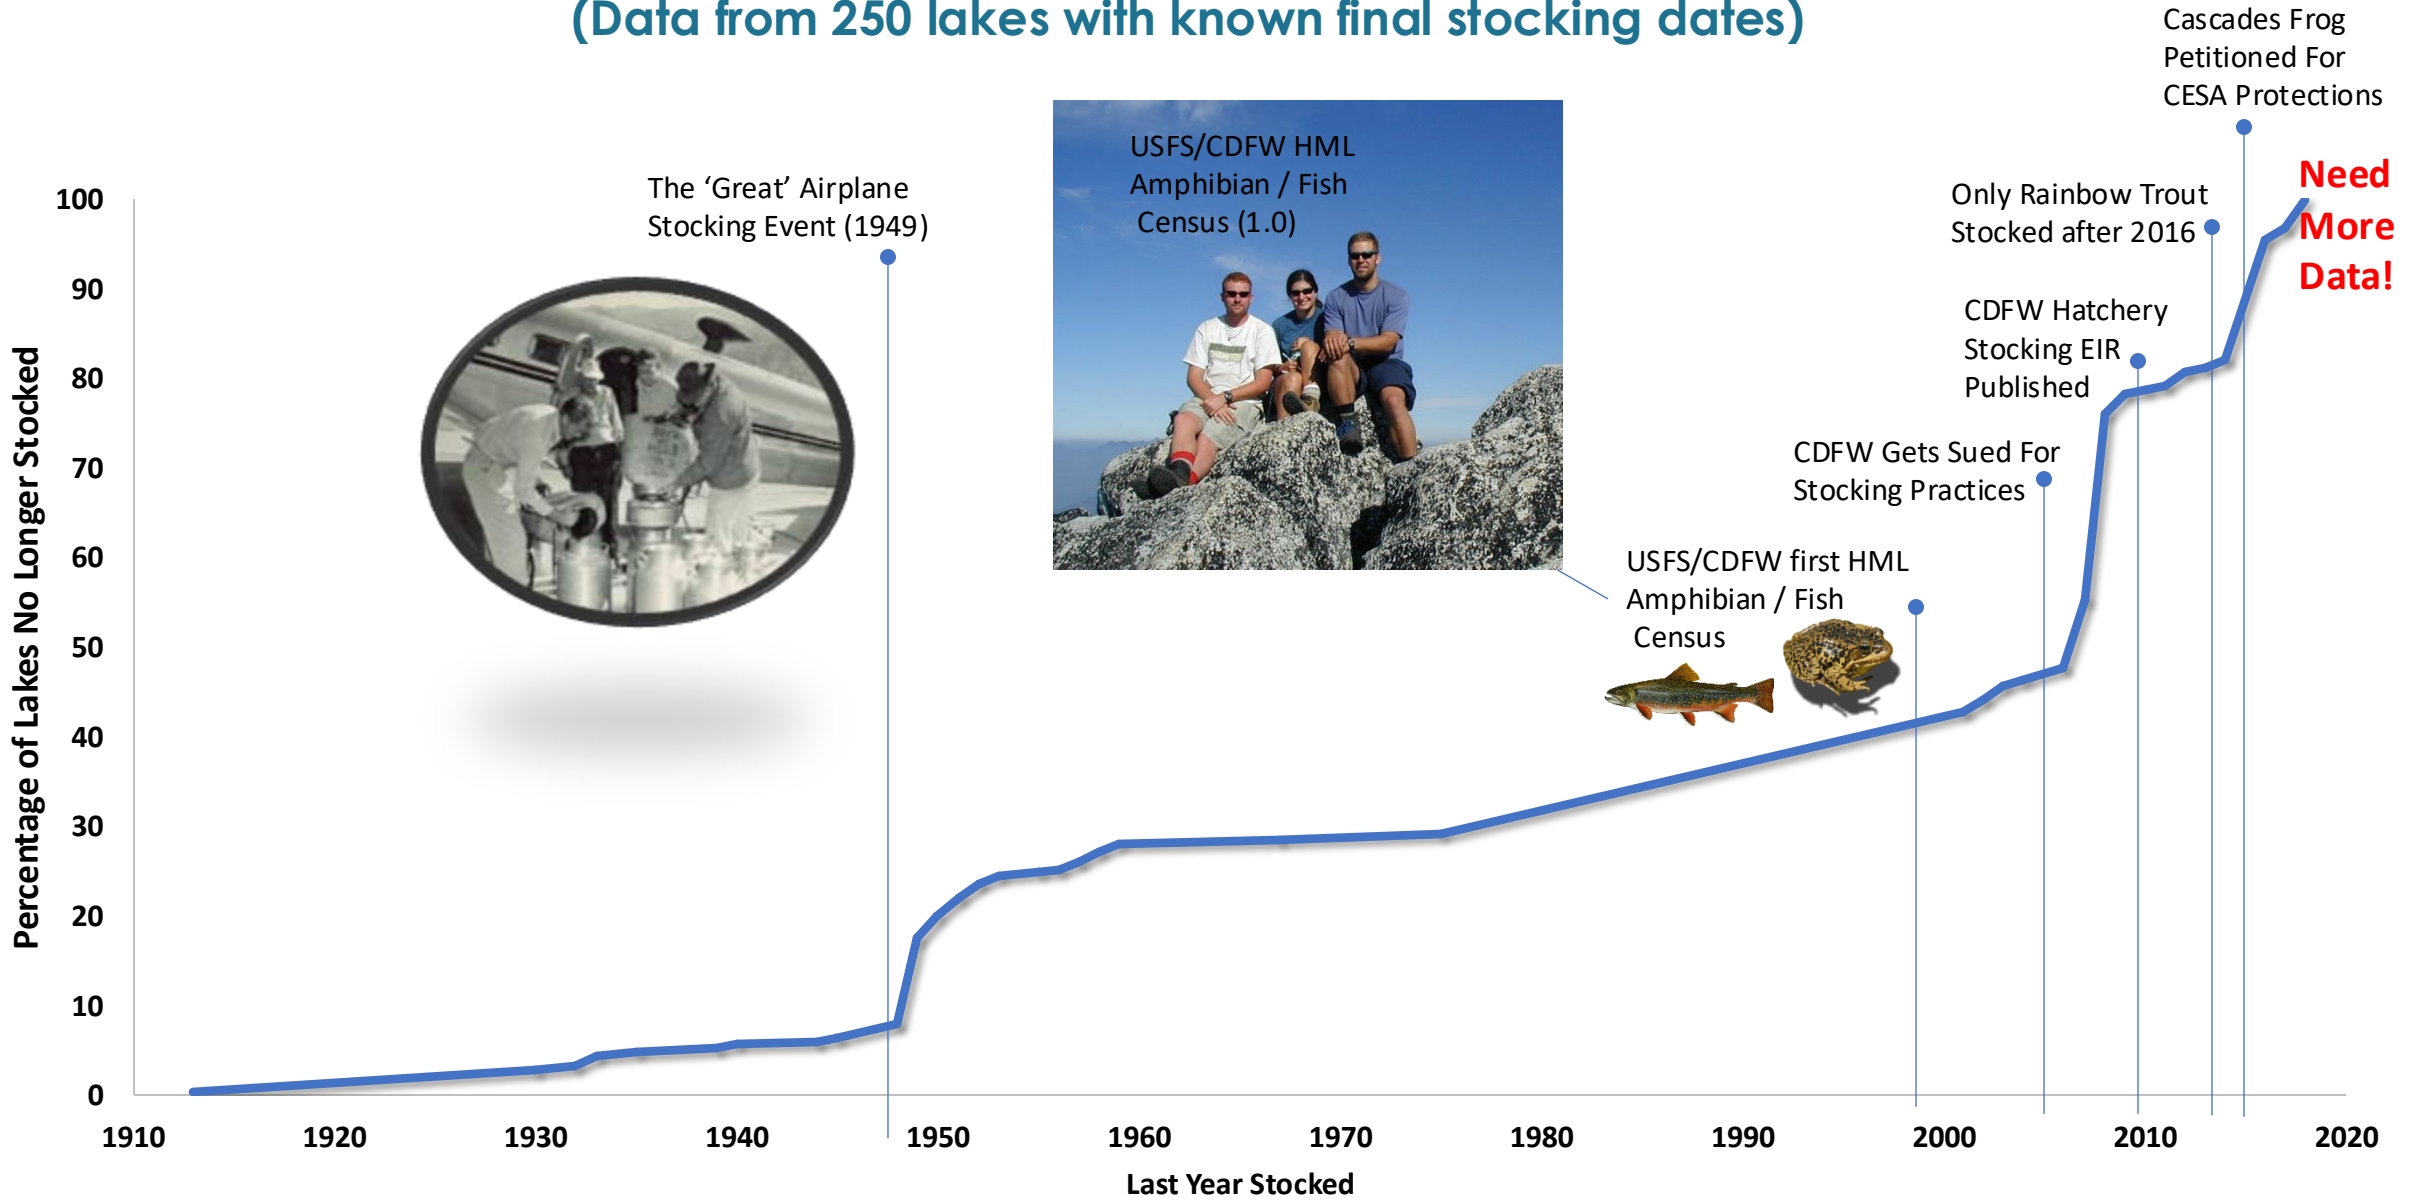

Maureen E Ryan^{1,2*}, Wendy J Palen², Michael J Adams³, and Regina M Rochefort⁴

Stocking Cessation Chronology Across Lakes of the Klamath Mountains

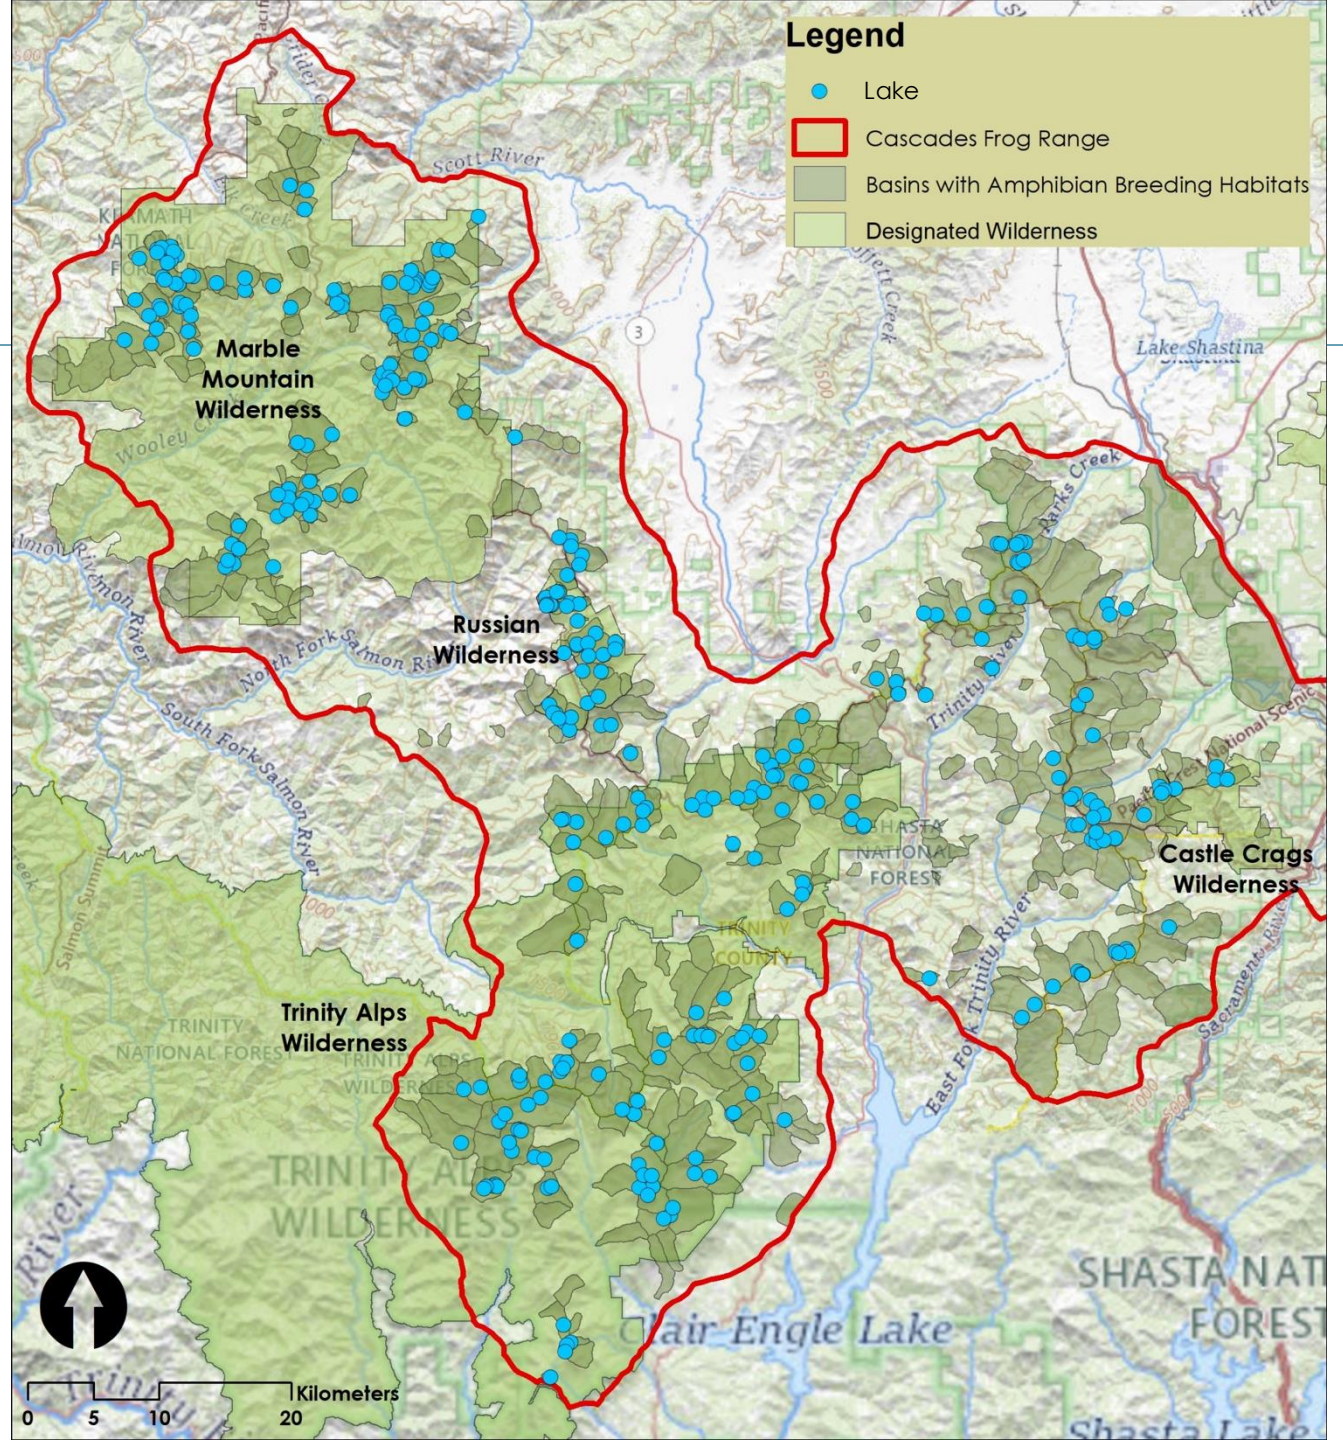

(Data from 250 lakes with known final stocking dates)

State Wildlife Grant 2021-2024

HML 2.0

- Survey for Cascades Frogs across their historic Klamath Range.
- Survey for non-native fish in lakes across the historic range of Cascades Frogs.
- Compare survey results to previous robust effort over 20 years ago (HML 1.0).
- Use current data to inform a new range-wide fisheries management and conservation strategy.

Survey Methods

Exact same methods as 20 years ago with a few new tricks....

Amphibians and Reptiles
Visual Encounter Surveys

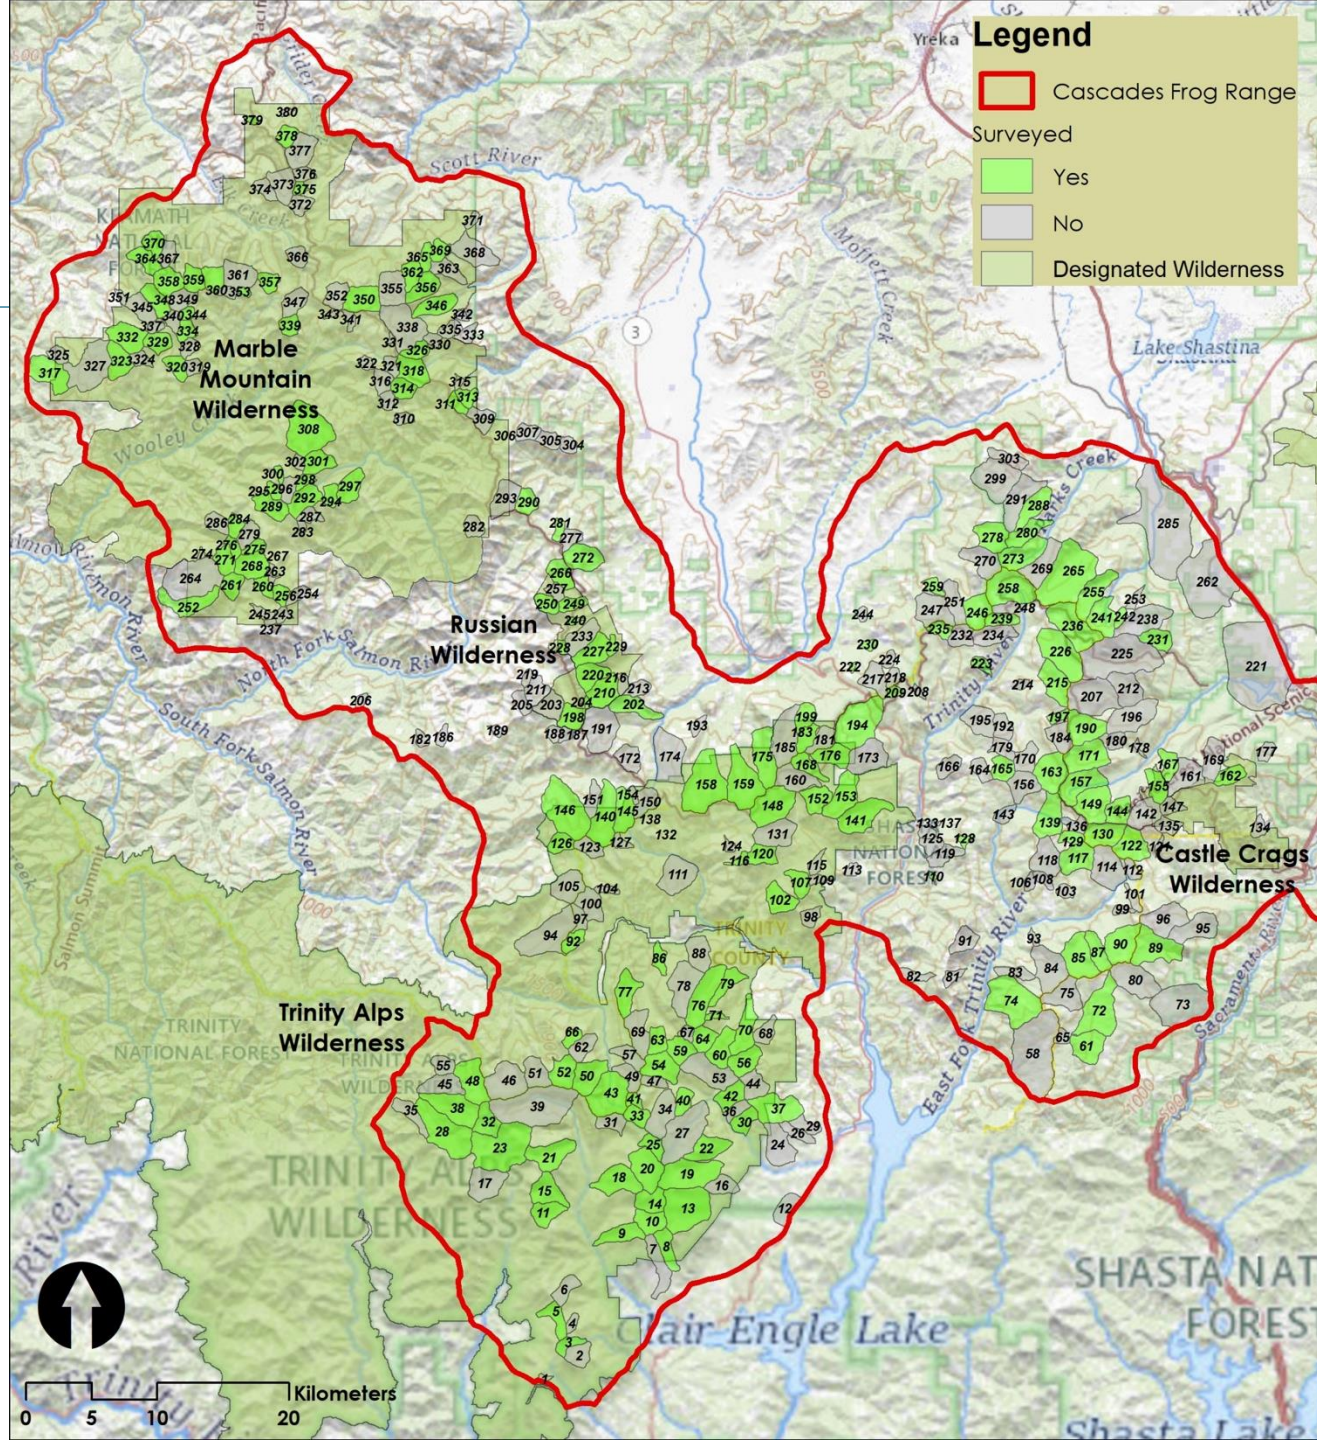

Fishes
Gill Netting and Visual Encounter Surveys

2021-2024 Survey Effort

- Surveyed ~1 400 sites for amphibians across 224 basins
- >550 identical sites surveyed between the 2 periods:
(1999-2002) and (2021-2024)
- 261 lakes gill net sampled for trout
(Only 26 lakes remain to surveyed in 2025!)

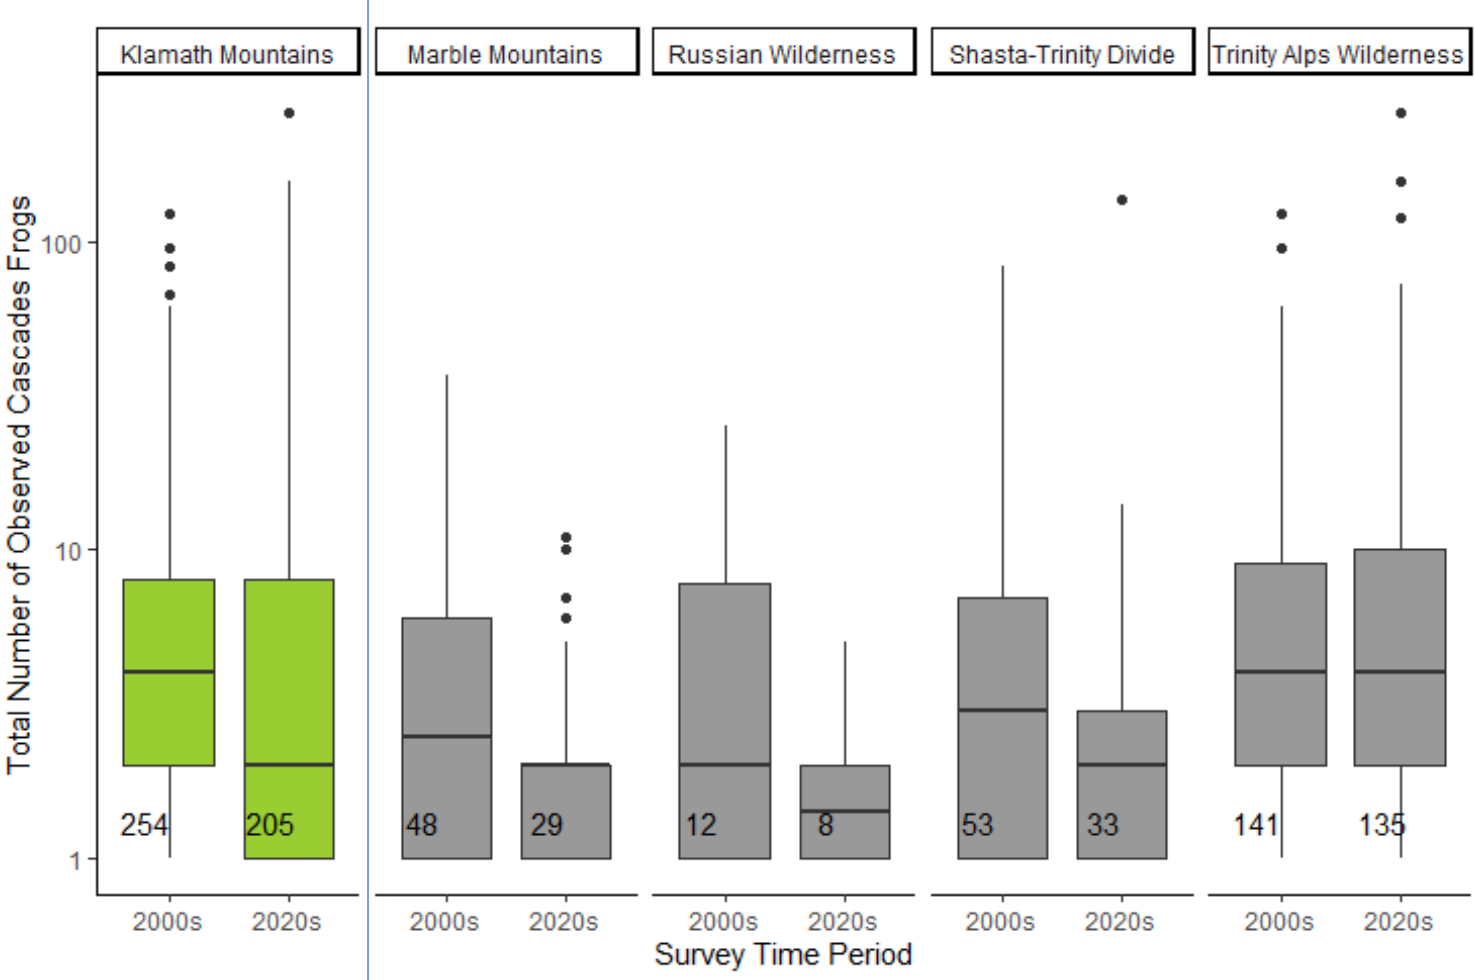

Cascades Frog Site Occupancy in the Klamath Range Across 559 Sites Separated By ~ 20 Years

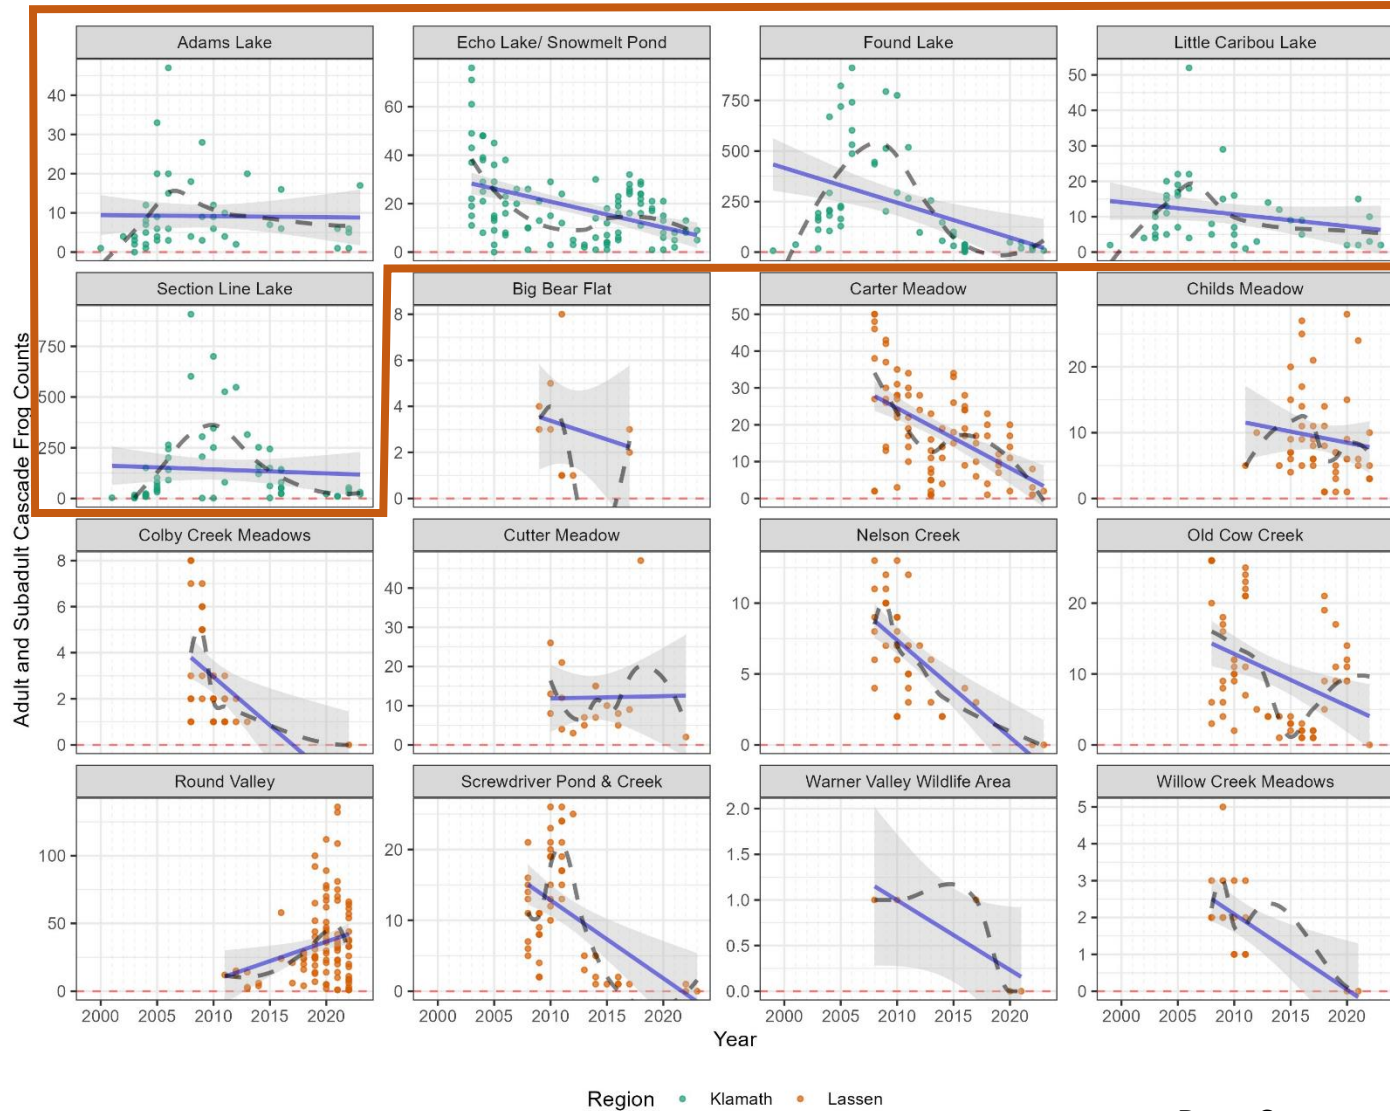

Current survey found them at ~17% fewer sites relative to 20 years ago

Current Cascades Frog survey counts across 559 Klamath Mountain sites are ~ 50% lower than those observed ~20 years ago.

Cascades Frog count trends across 16 CMR sites in the Klamath and Cascades ranges 2003-2023

Data Sources: CDFW, US Forest Service. Graphic: Adam Cummings

Fishery Status Within the Cascades Frog Range

Stocking History

- 279 Lakes(90%) historically stocked.

Current Trout Population Status (after ceasing stocking for many years)

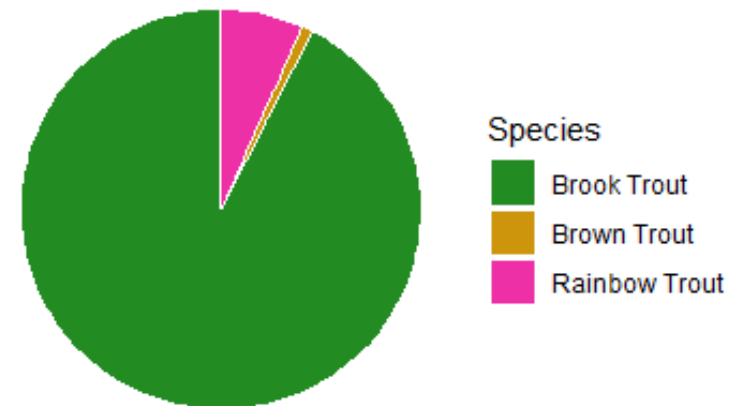

- Present in 209 (75%) of historic stocked waters.
- Natural reproduction in at least 84% of waters.
- No longer present in 70 (25%) historically stocked waters
- **Additionally found in 66 meadow systems.

Historic Composition

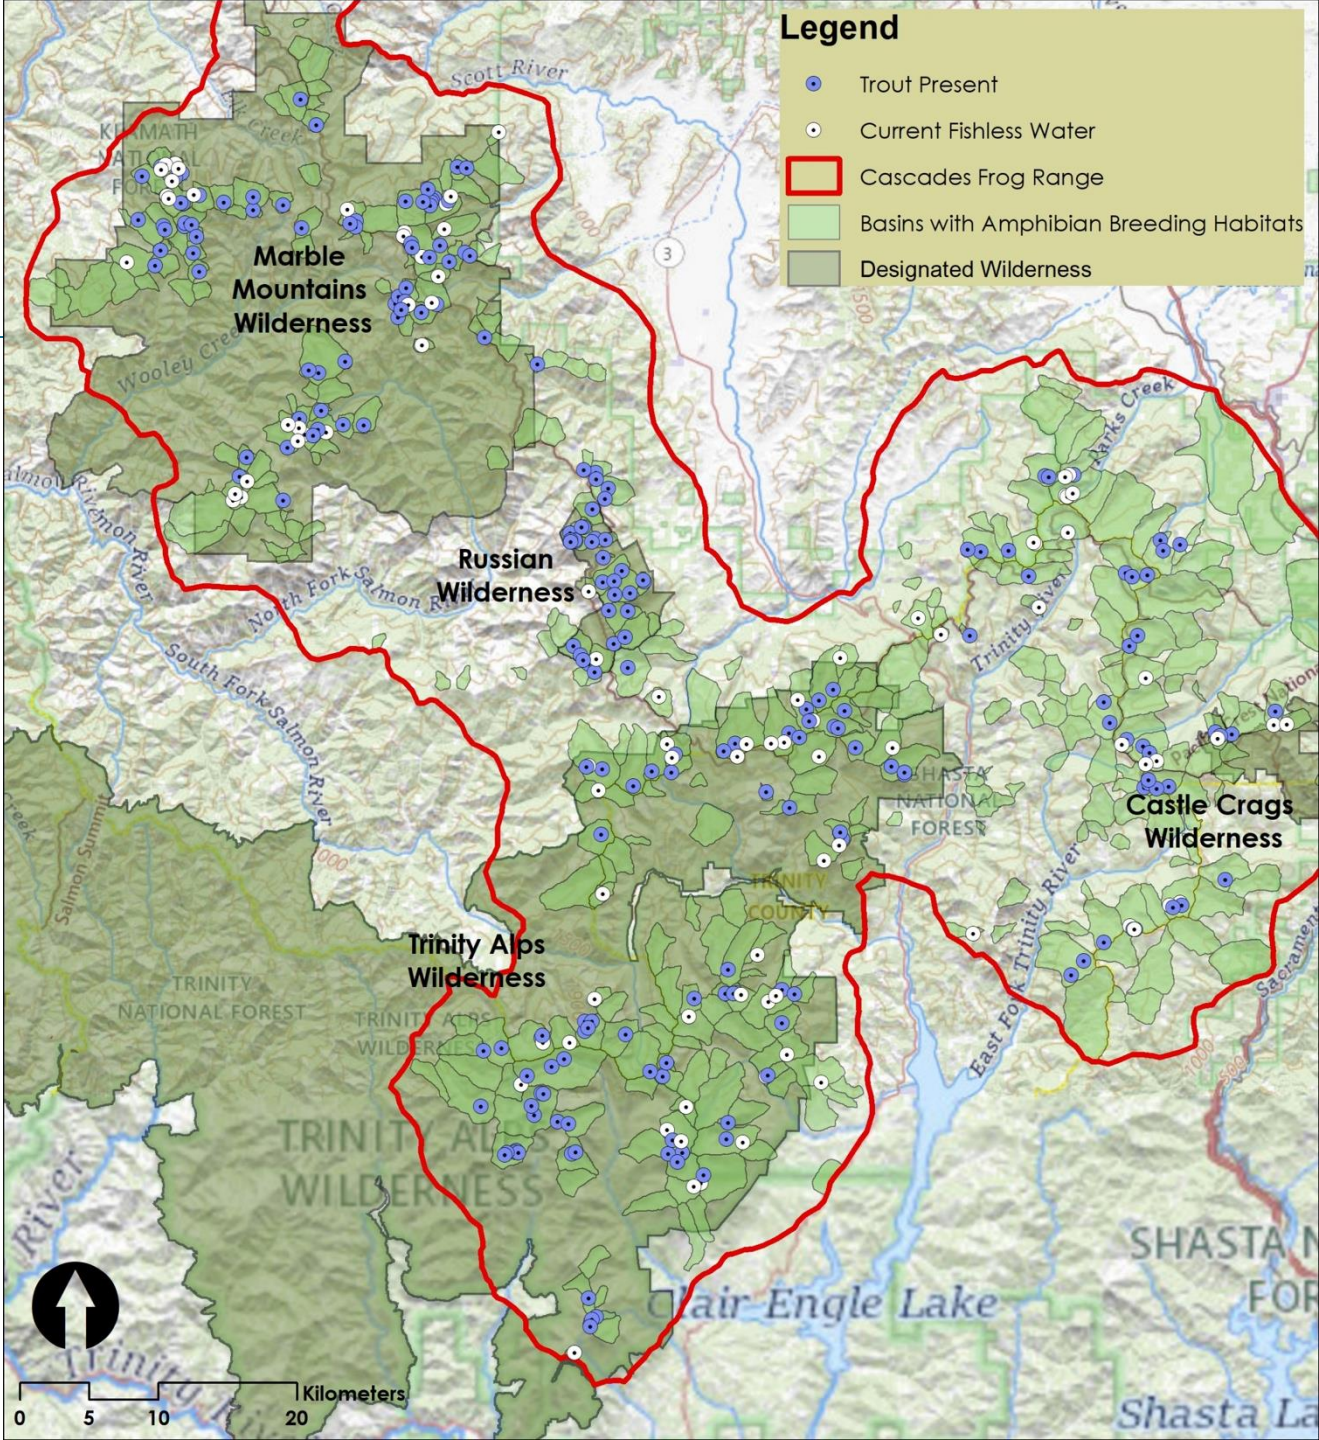

Current Composition

Current Trout Distribution

- Present in 209 lakes (75%)
- 89% of combined lake surface area.
- No longer present in 70 lakes (25%)
- But only ~11% of combined lake surface area.

Individual Lake Management Options

1) Passive
Maintain Healthy
Naturalized Trout
Populations

2) Active
Resume Trout
Stocking in Select
Lakes

3) Passive
Maintain Currently
Fishless Waters

4) Active
Remove Trout at
Critical Climate-
Resilient Locations

Considerations for Managed Fisheries in High Lakes

What is best for the fish?

- Fish health
- Fish persistence
- Natural vs stocked populations

What is best for the angler?

- Popularity
- Hiking distance
- Fish Quality/ multiple species

What is best for the amphibians?

- Breeding habitats
- Adjacent permanent waterbodies
- Dispersal corridors
 - Fish Removal in key habitats

Overlooking Grizzly Lake

Multi Criteria Decision Analysis (MCDA)

- Used in wildlife resources for balancing finite resource use by multiple conflicting interest groups
- Steps:

- Intrinsic Potential (IP) for Interest group
- Use a weighted scoring to determine importance of lake for each interest group.
- Calculate restoration value and fishery quality scores separately.

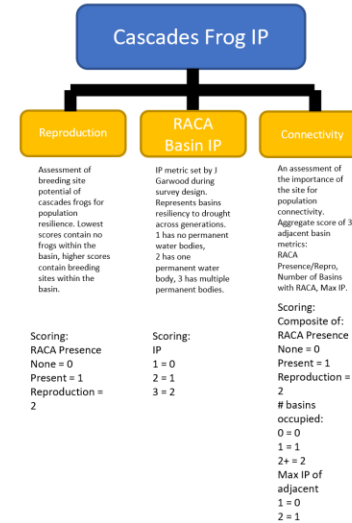

Lake	Criteria 1	Criteria 2	Criteria 3	Total Score
Salmon Lake	2	1	0	3

Table assessing overall importance of a lake for trout

Lake	Trout	Frog	Angler	Resto Potential	Total
Weight	5	1	3	1	
Salmon Lake	5*3 = 15	1*6 = 6	3*2.167 = 6.5	1*4 = 4	31.5

$$\text{Site Resto Score} = \frac{(\text{Frog} * 2)}{\text{Trout} + (\text{Frog} * 2) + \text{Angler}}$$

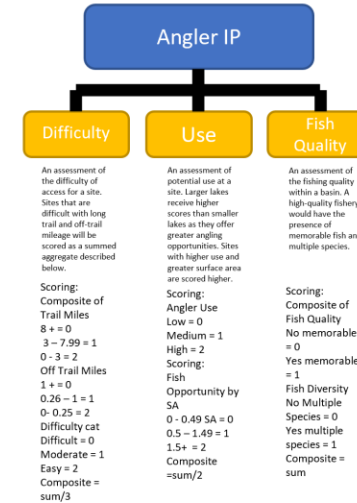

$$\text{Salmon Lake} = \frac{(46.66 * 2)}{30 + (46.66 * 2) + 27.33} = 0.61$$

Lake	Criteria 1	Criteria 2	Criteria 3	Total Score
Salmon Lake	2	2	2	6

Table assessing overall importance of a lake for Cascades Frogs

Lake	Fish	Frog	Angler	Resto Potential	Total
Weight	1	5	1	3	
Salmon Lake	1*3 = 3	5*6 = 30	1*1.66 = 1.66	3*4 = 12	47.167

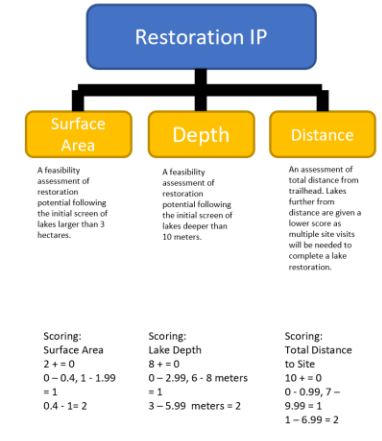

Lake	Criteria 1	Criteria 2	Criteria 3	Total Score
Salmon Lake	0.66	0.5	1	2.167

Table assessing overall importance of a lake for angler opportunities

Lake	Trout	Frog	Angler	Resto Potential	Total
Weight	3	1	5	1	
Salmon Lake	3*3 = 9	1*6 = 6	5*1.66 = 8.3	1*4 = 4	29.83

$$\text{Site Fishery Quality Score} = \frac{(\text{Trout} * 2) + (\text{Angler} * 0.5)}{\text{Frogs} + (\text{Trout} * 2) + \text{Angler}}$$

$$\text{Salmon Lake} = \frac{(30 * 2) + (27.33 * 0.5)}{46.66 + (30 * 2) + 27.33} = 0.60$$

Lake	Criteria 1	Criteria 2	Criteria 3	Total Score
Salmon Lake	2	1	1	4

Final MCDA Results

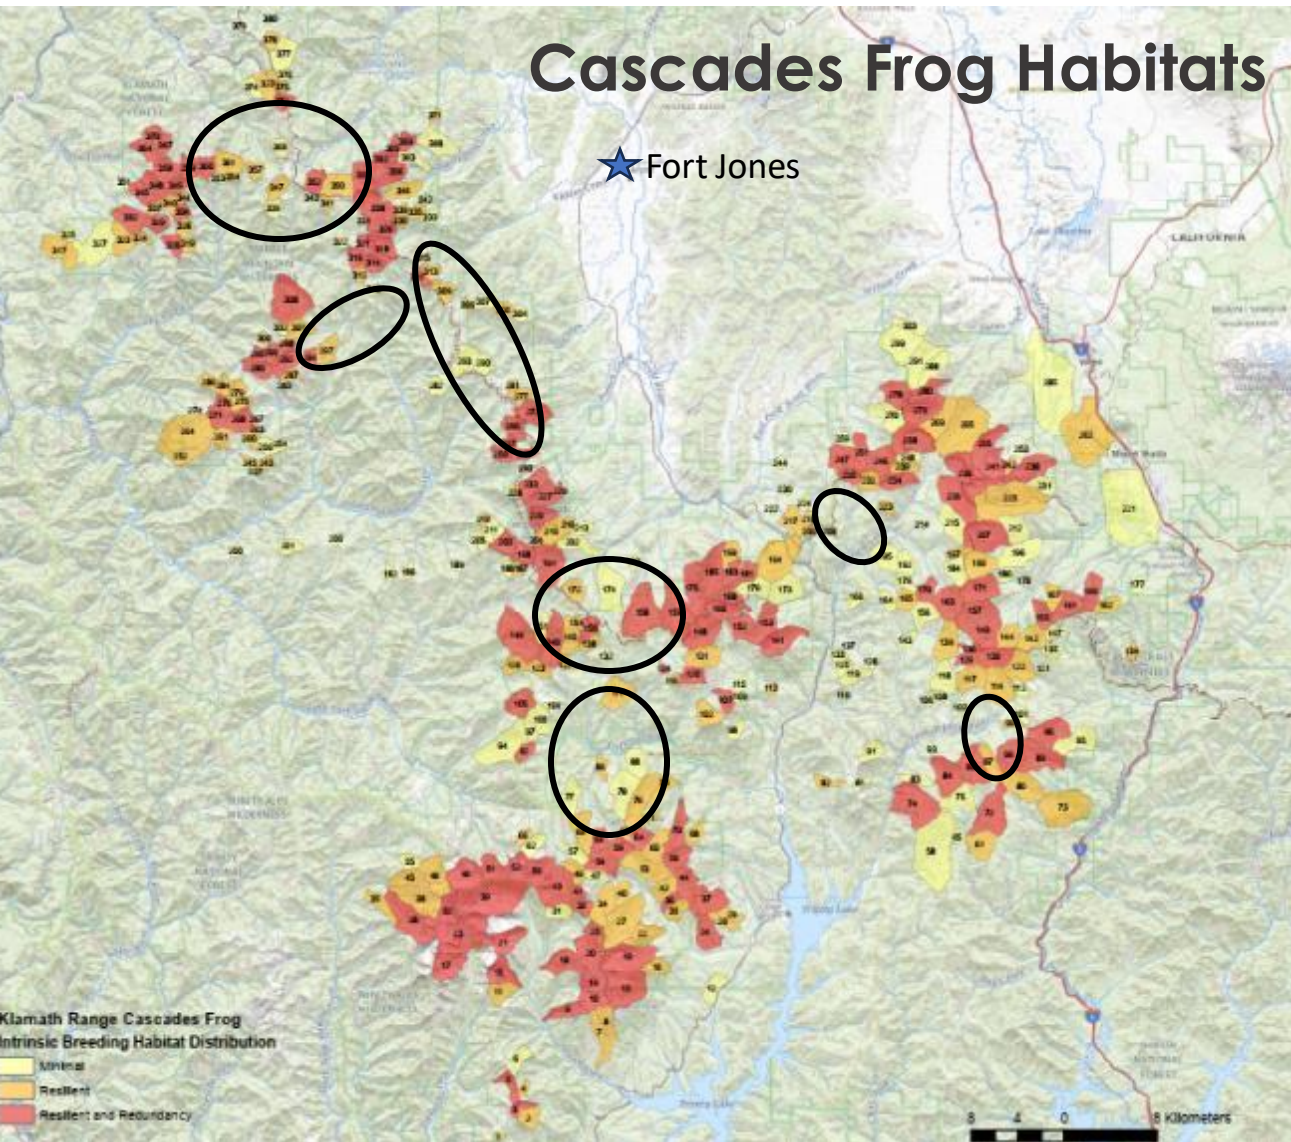

Relationship Between Weighted Fishery Quality and Restoration Scores for 114 Candidate Lakes

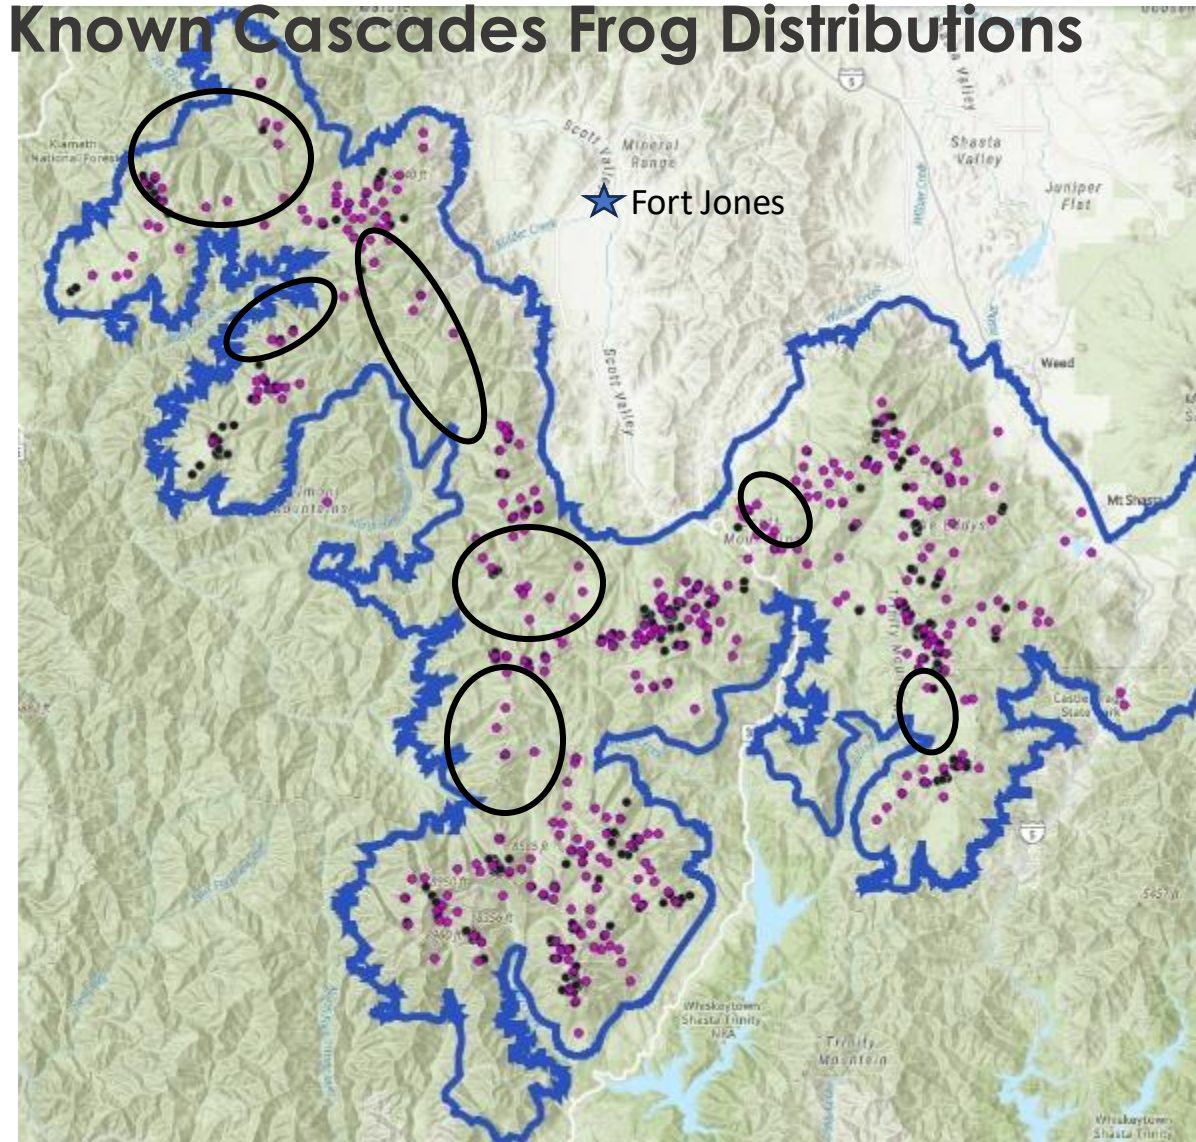

Grizzly Lake

Cascades Frog Metapopulation Structure

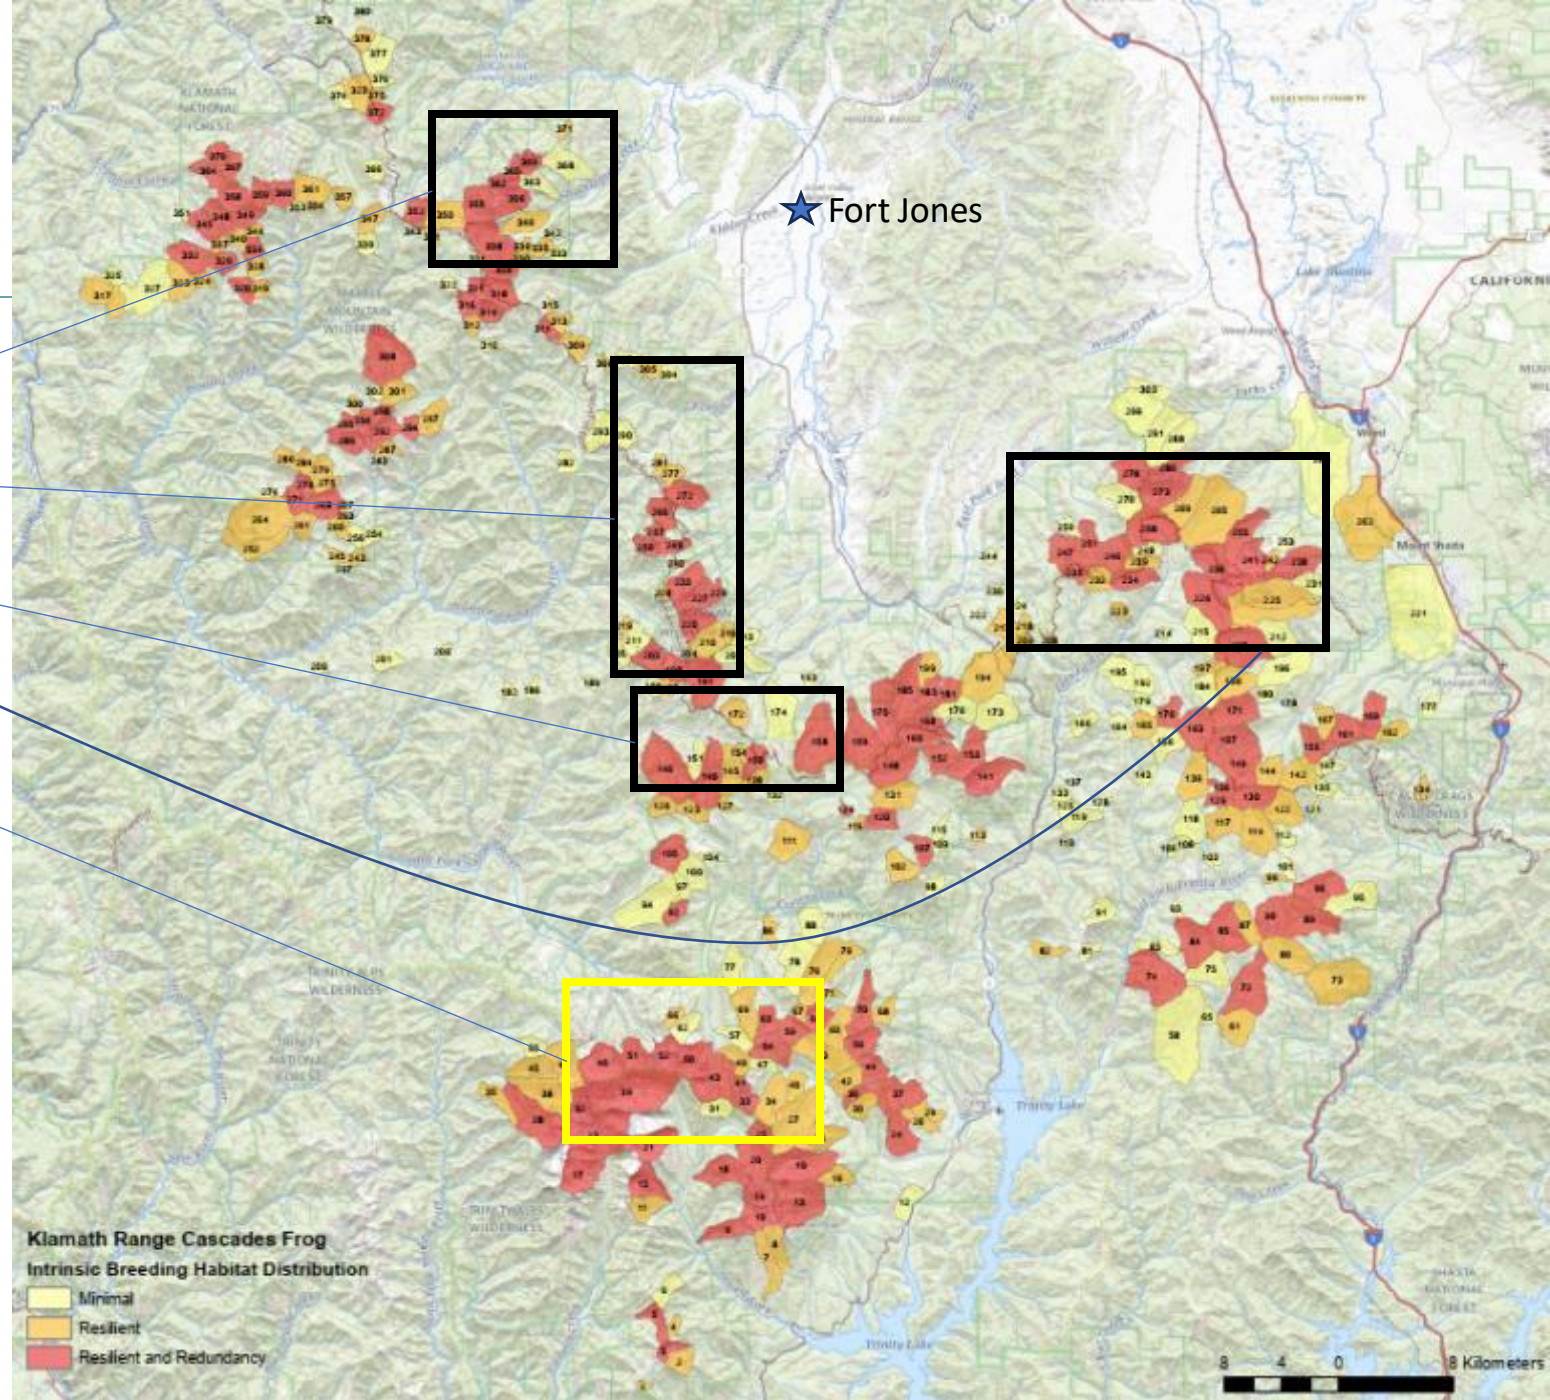

Known Cascades Frog Distributions

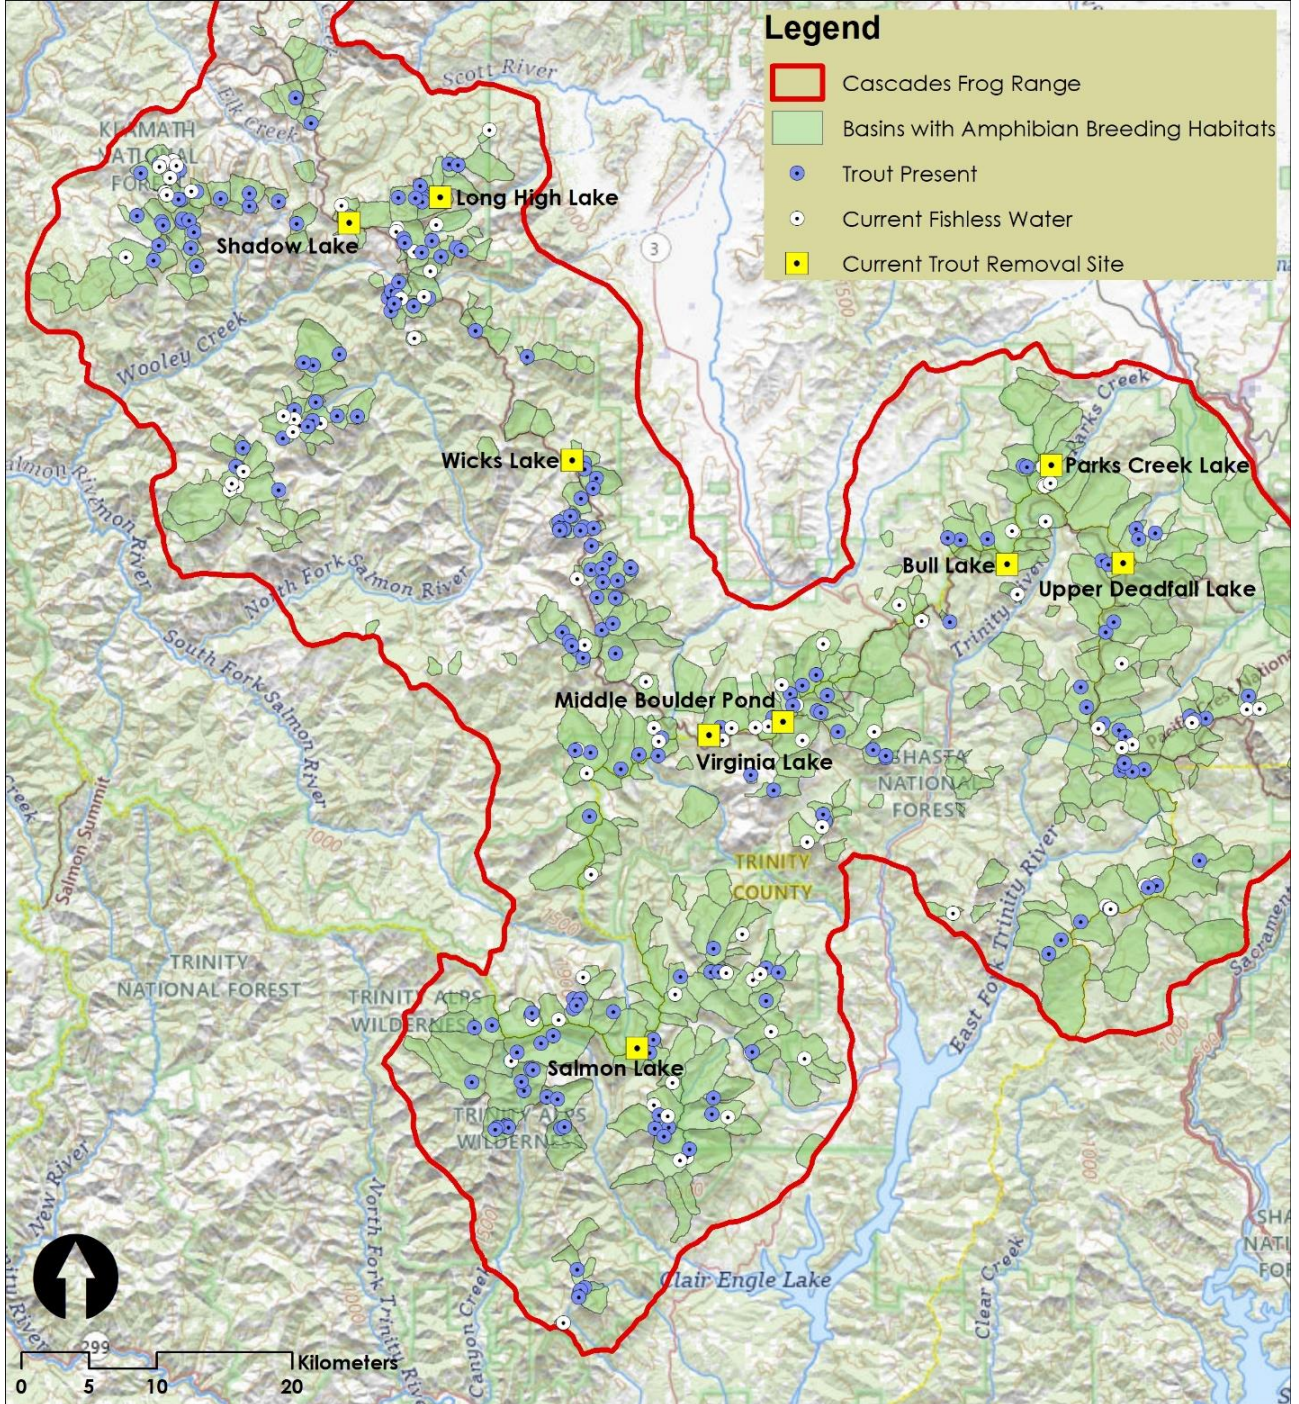

Restoration: Regions of Focus

- NE Marble Mountains (2 sites)
- Russian Wilderness (1 Site)
- Northern Trinity Rim (2 sites)
- Scott-Eddy Mountains (3 sites)
- NEW IN 2025: Trinity Alps (2 sites)

Current Trout Distribution and Lake Restoration Sites

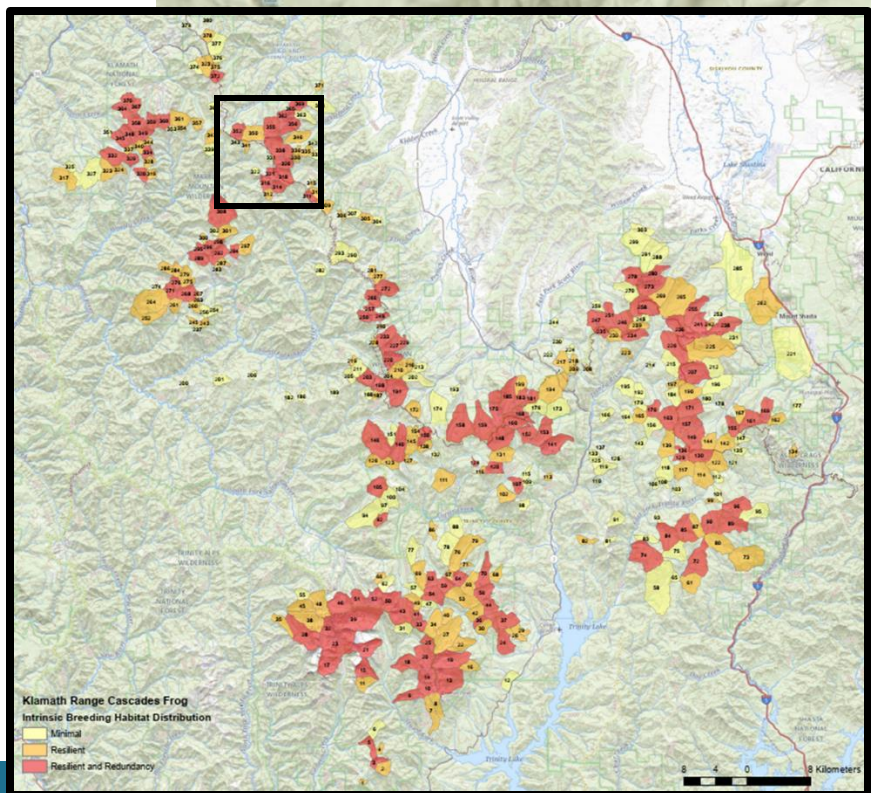

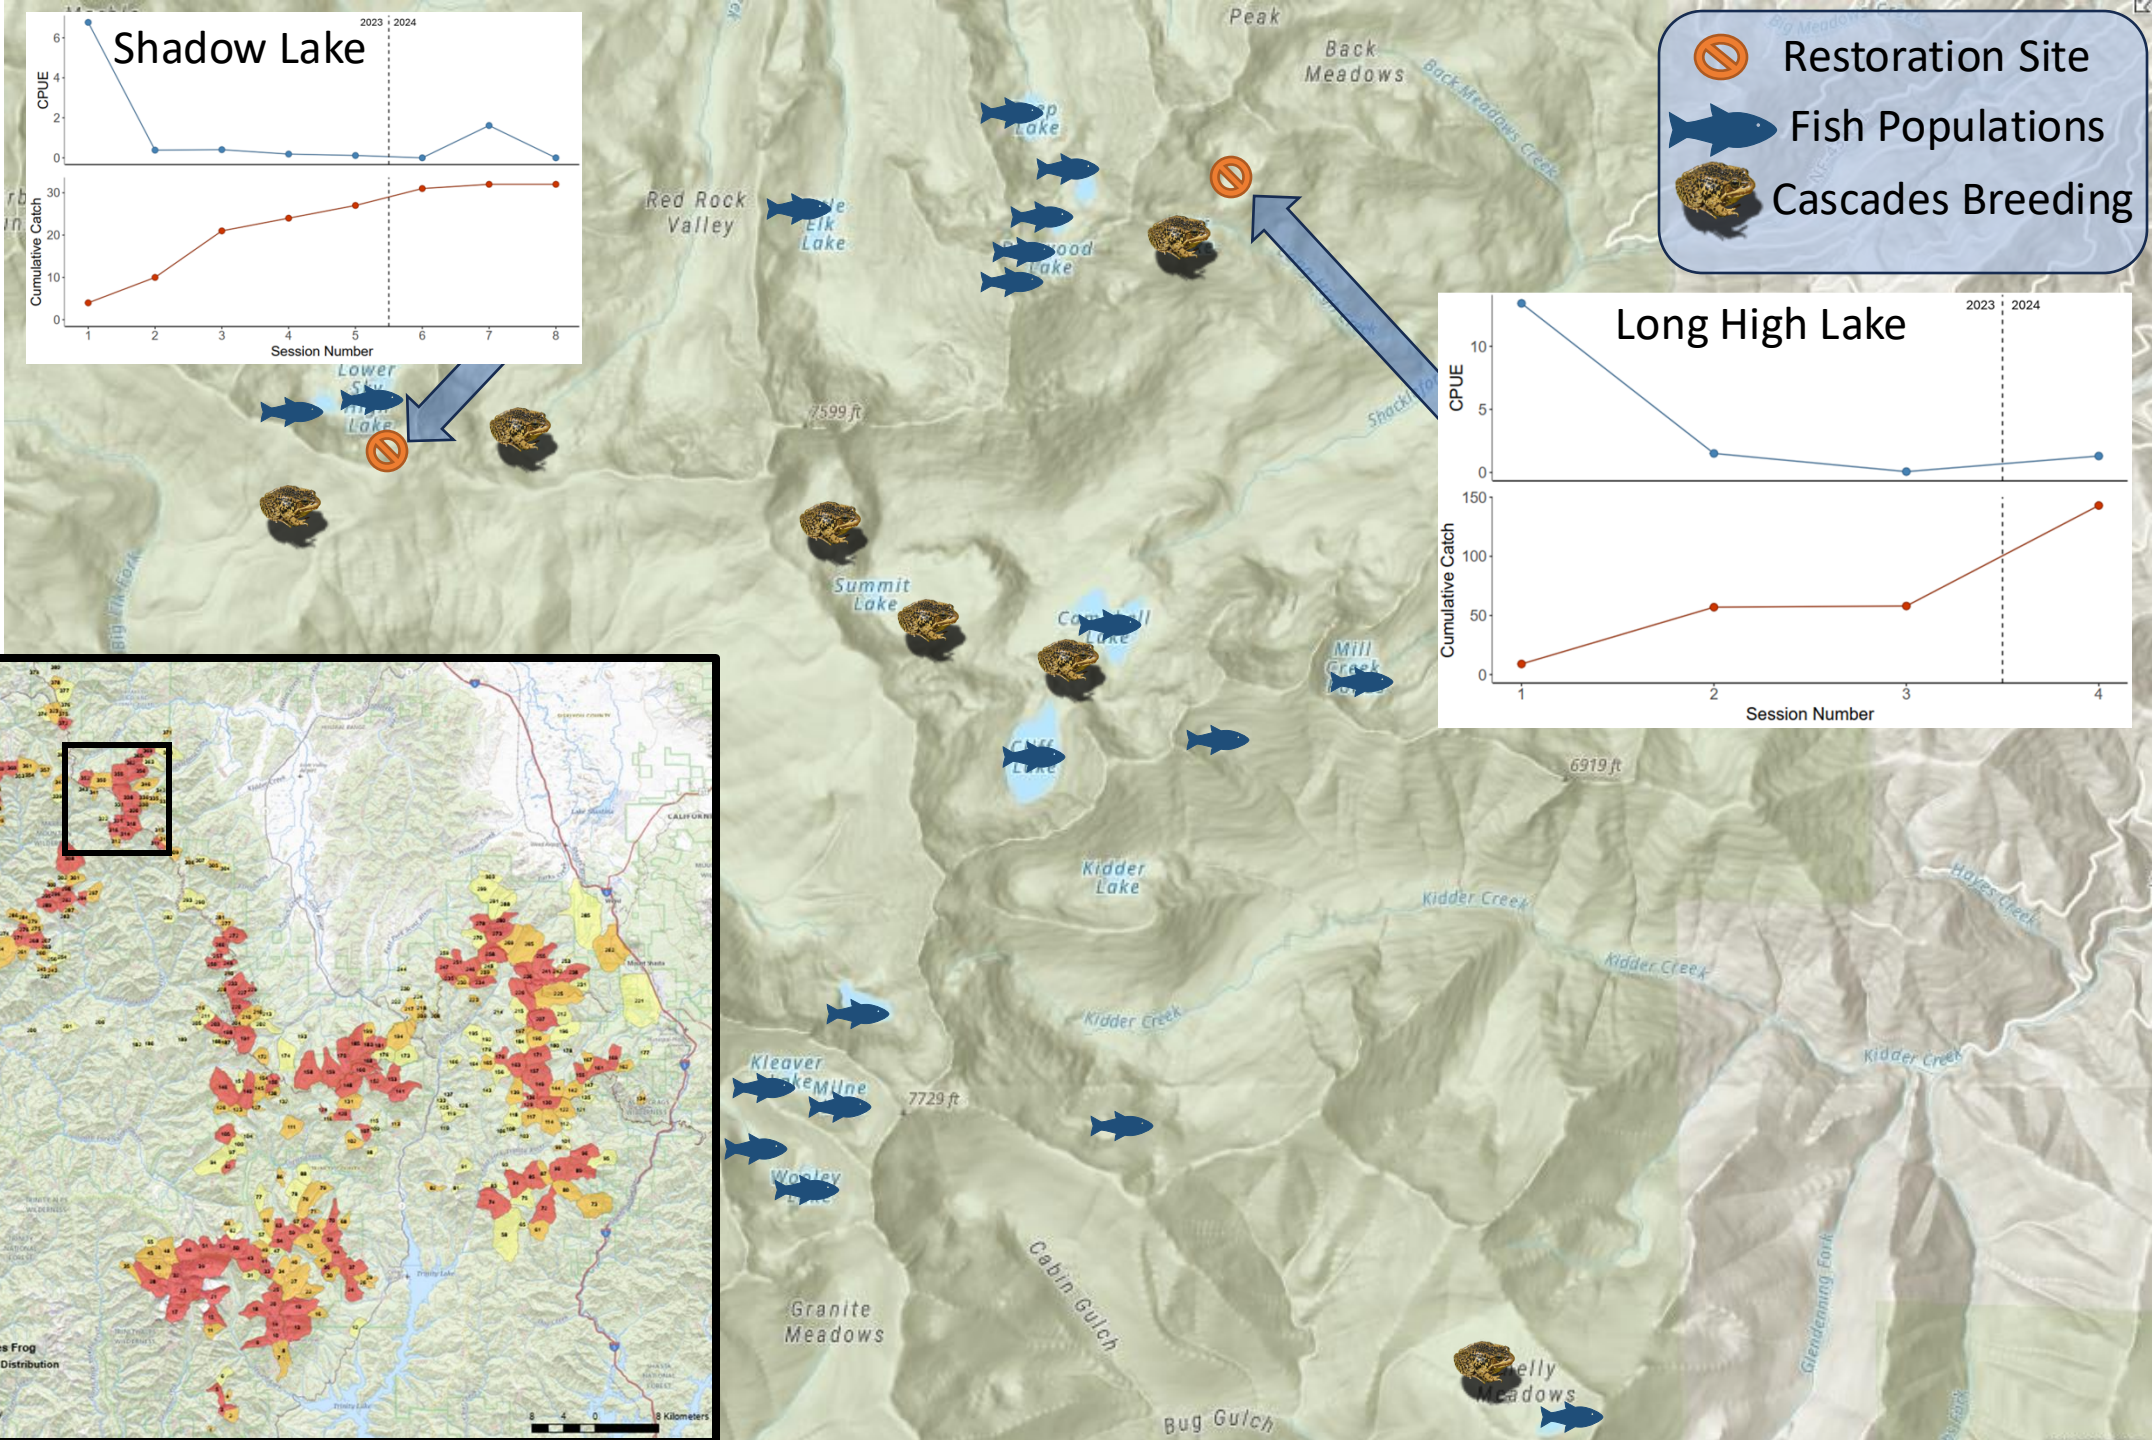

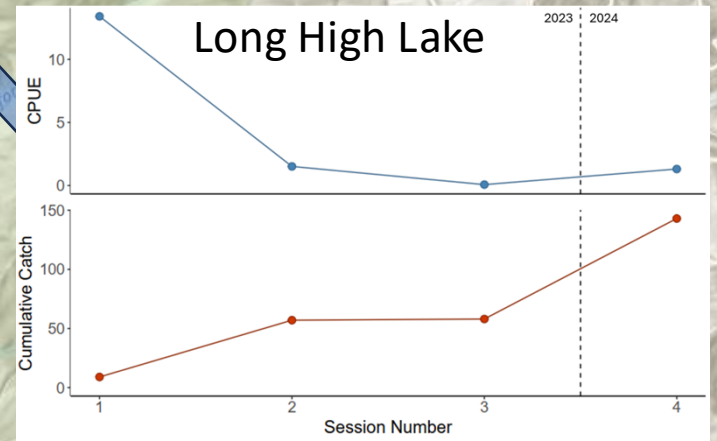

Marble Mountain Wilderness

- Long High Lake
- Shadow Lake

- Restoration Site
- Fish Populations
- Cascades Breeding

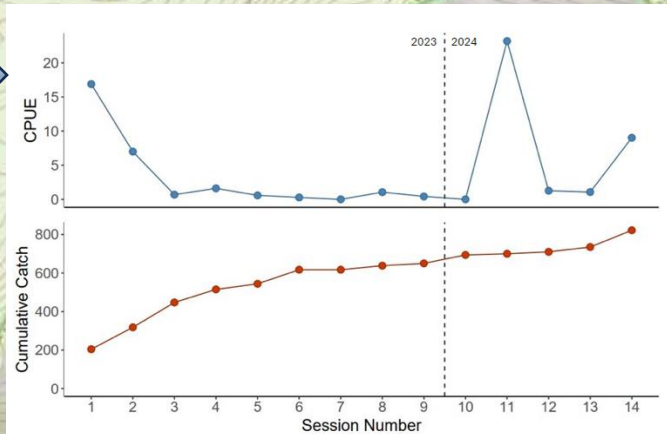

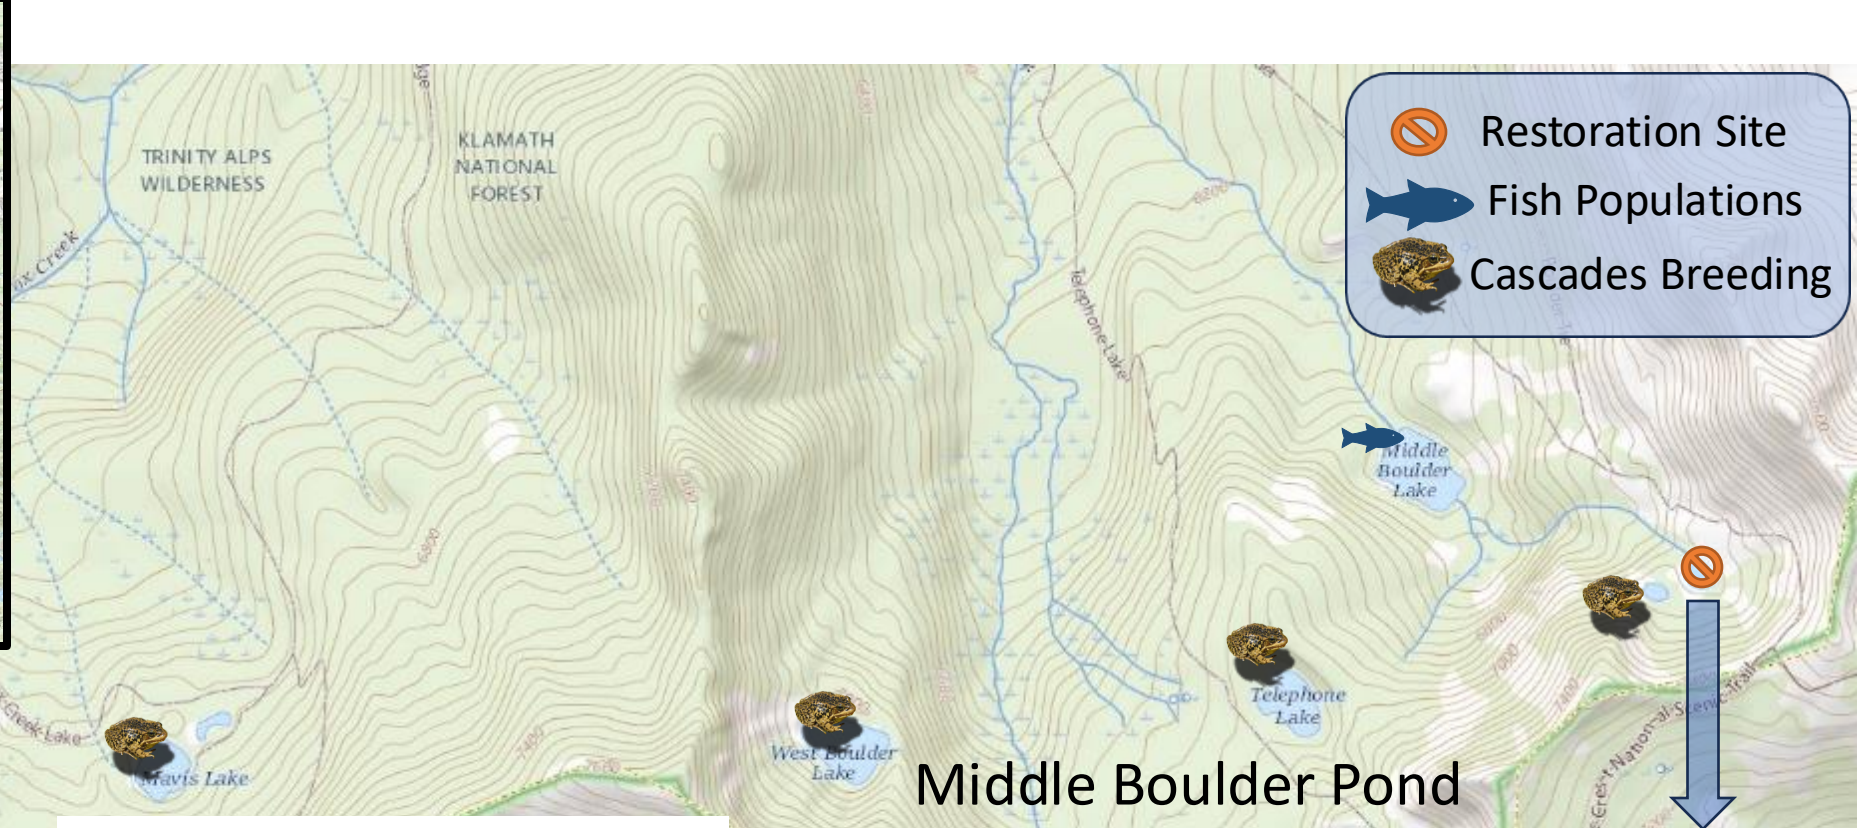

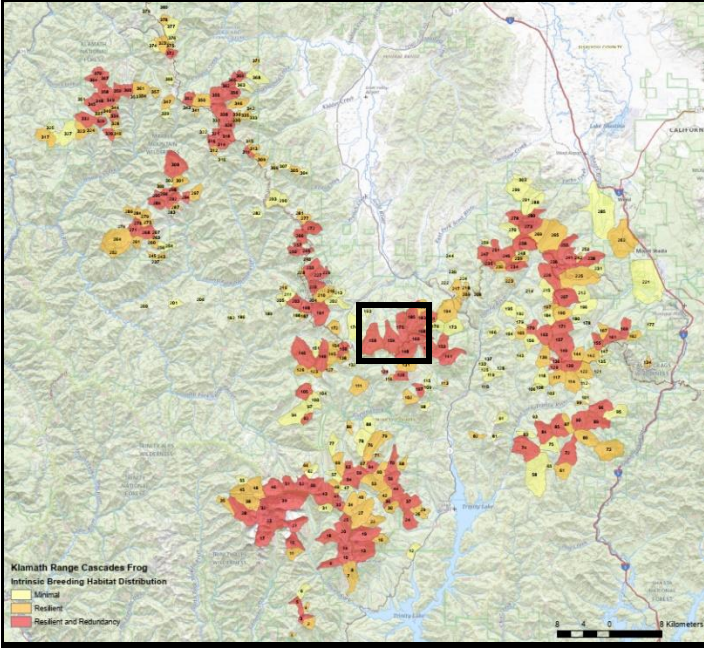

Russian Wilderness and Northern Trinity Alps

- Wicks Lake
- Virginia Lake
- Middle Boulder Pond

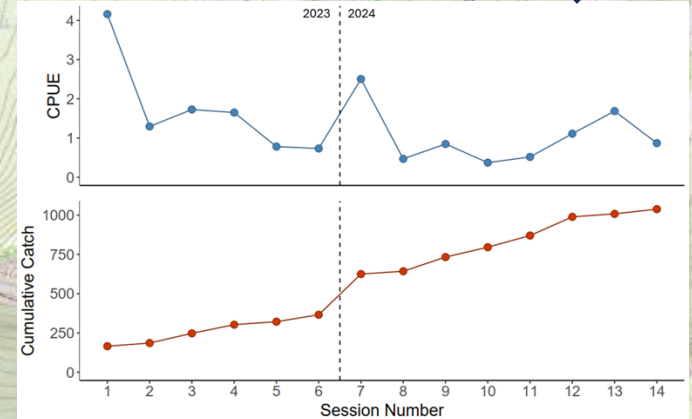

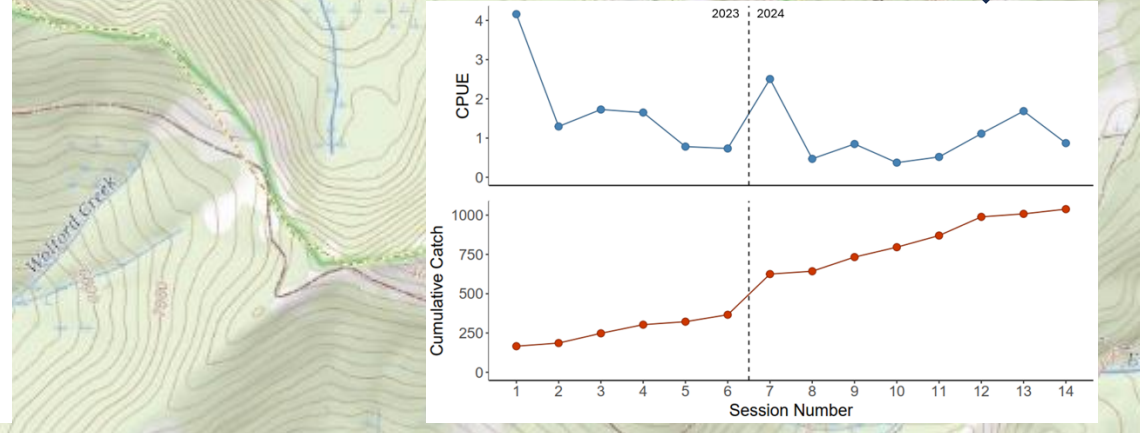

- Restoration Site
- Fish Populations
- Cascades Breeding

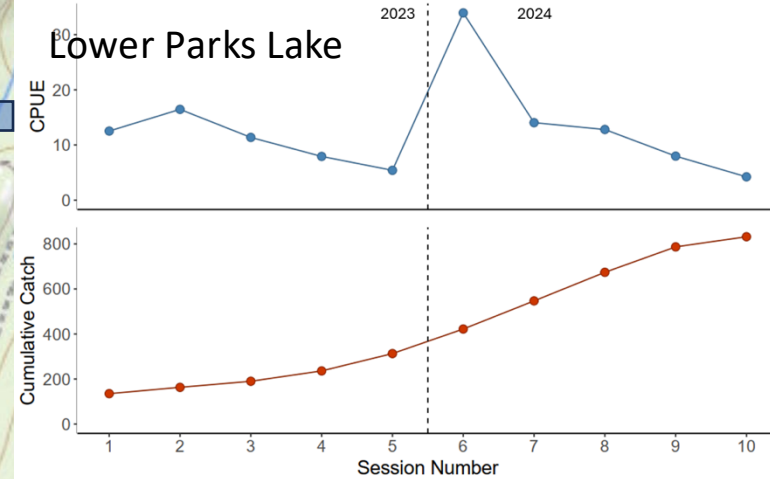

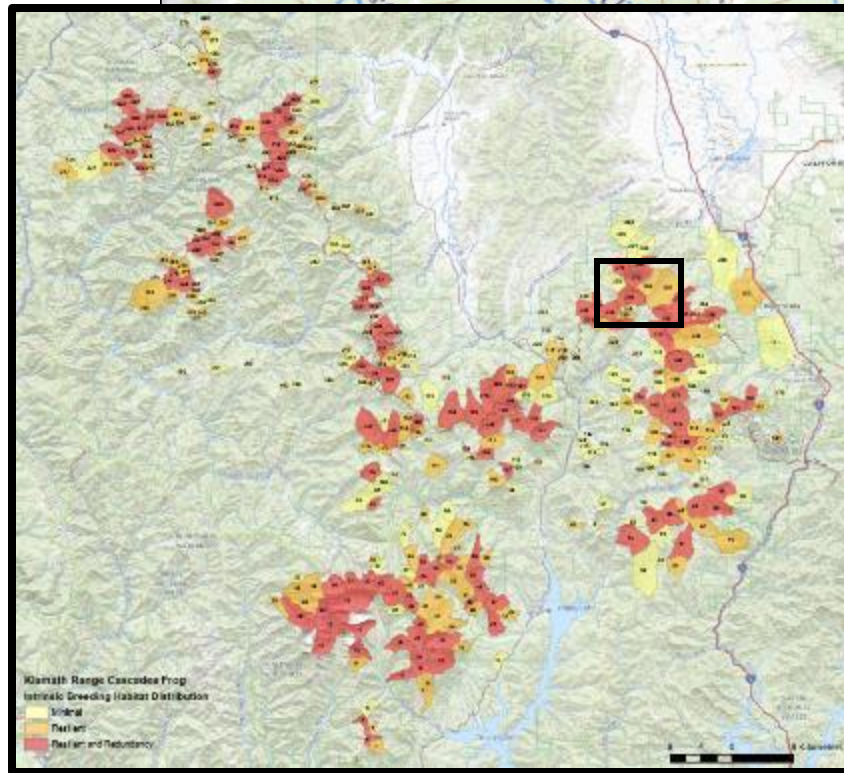

Middle Boulder Pond

Scott-Eddy Shasta-Trinity Mountains

- Upper Deadfall Lake
- Bull Lake
- Lower Parks Creek Lake

Effort in a broader context

- We are removing Brook Trout from 8 lakes representing 3.8% of current 209 lakes with trout.
- This is only 1.1% of the combined lake surface area containing trout populations.
- The lakes we are restoring are high-value conservation habitats.

Heather Lake

Management Moving Forward

1) Maintain Healthy Naturalized Trout Populations

- Remote, little used water bodies

2) Resume Trout Stocking in Select Lakes

- Popular, high use lakes for public benefit

3) Maintain Currently Fishless Waters

- Free Frog Restoration!

4) Remove Trout at Critical Climate-Resilient Locations

- Finish sites we started
- start a few more sites in 2025

Modernizing Angler Resources

Update Heirloom (1960s) Regional Tri-fold Angling Guides

CDFW Statewide Inland Fishing Guide
<https://apps.wildlife.ca.gov/fishing/>

The screenshot displays the CDFW Statewide Inland Fishing Guide web application. The top view shows a map of California with blue dots indicating fishing locations. A blue arrow points to a zoomed-in view of a specific location, Ukonom Lake, in Siskiyou County. The zoomed-in view shows a detailed map with a legend and a table of fishing locations.

Fishing Locations	
Name:	Ukonom Lake
County:	Siskiyou
Fish:	Brook Trout, Rainbow Trout

Modernizing Angler Resources

CDFW Region One—Interactive High Mountain Lakes Fishing Directory (In Development)

The screenshot displays the 'High Mountain Lakes Fishing Guide' web application. The interface features a dark blue header with the CDFW logo and navigation tabs: Home, Fish Presence (selected), Fishable Waters, Hiking Access, and More Information. The main content area is a map of the High Mountain Lakes region in California, showing various watersheds and wilderness areas. The map is overlaid with colored pins indicating fish presence: green for current presence (2024), blue for previous presence (2016-2023), and orange for historic presence (2000-2015). A search bar at the top right allows users to find lakes. On the right side, there is a 'Fish Presence' filter panel with three sections: 'Find Lakes with Rainbow Trout Presence' (toggle on), 'Find Lakes with Brook Trout Presence' (toggle on), and 'Brown Trout Presence' (toggle on). Below these are icons for each fish species. A 'Trout Presence- (Under Development)' section includes an 'Attribute filter' for 'Latest Presence is', with options for 'All -', 'Current Presence (2024)', and 'Historic Presence (2000- 2015)'. The bottom of the screen shows a Windows taskbar with the system clock at 2:28 PM on 2/18/2025.

Modernizing Angler Resources

CDFW Region One—Interactive High Mountain Lakes Fishing Directory (In Development)

The screenshot displays the 'High Mountain Lakes Fishing Guide' web application. The top navigation bar includes the California Fish and Wildlife logo and links for Home, Fish Presence, Fishable Waters (highlighted), Hiking Access, and More Information. The main content area is divided into three sections:

- Left Panel:** Features a photograph of Milne Lake and a 'Species Details' section with the following information:
 - Last observed presence of fish (any species): **2024**
 - Last time fish were stocked in the site: **2018**
 - Last observed trout reproduction in the site: **2024**
 - Last known presence of Brook Trout in the site: **2024**
 - Last known presence of Brown Trout in the site:
 - Last known presence of Rainbow Trout in the site: **2024**A question is posed: "Is there a presence of rainbow trout greater than 12" or greater than 14" for all other species? No".
- Center Panel:** A map titled 'milne' showing the lake's location. A search result window is open, displaying a map of the lake with a legend for 'Latest Fish Presence (All Species)'. The legend includes color-coded boxes for the years: 2024 (green), 2021-2023 (blue), 2016-2020 (orange), and 2000-2015 (yellow).
- Right Panel:** A 'Nearby Lakes' section with a search and sort function. It lists 'Milne Lake' and 'Tangle Blue Lake', each with a 'Latest Presence' and 'Information' section detailing the presence of Brown Trout, Brook Trout, and Rainbow Trout for the year 2024.

The bottom of the screen shows a Windows taskbar with a search bar and various application icons, and a system tray with the date and time (2:26 PM, 2/18/2025).
